

What is the purpose of education?

- I believe the purpose of education is to teach us about the skills of working together so we are ready for the real world in work places.
- in my opinion. The purpose of education is to teach us the skills of working together, learning how the world works; seeing what you are interested in doing, and following that path to the best of your ability.
- The purpose of education, I feel, is to prepare the students for their future workplace, and also for their day to day life. Although this is the general idea of education I feel as though this goal isn't achieved in a straightforward manner, but instead we are taught a lot of off topic stuff, possibly to give us a base knowledge of what is to come, however I don't feel like that is always the case. Sometimes it is information that we will never need to know, and I feel as though teachers should try harder to weed out these theories over time.
- The purpose of education is to help students develop, learn, and keep skills that will be useful in life.
- I think it's 6 hours of kids sitting in a class room learning about some things may or may not use in their everyday life.
- Teaching looks like a teacher discussing about the topic but having some interest in the topic.
- I think the purpose of education is to actually learn things. Not just take study for a test that predicts your whole mark, then forget it right after. I want to slowly learn things then actually remember and know how to do that thing afterwards. Say I learn adjectives in French for a couple days, take a test, then forget it right after. That's of no use to me, and I'll forget right after, but if that test has a 90% people will think I'm amazing at it when I'm not. So I think the purpose of education is to actually learn and remember things to make us smarter. I think that's why I like reading, language, and English.
- the purpose of education is we have to get educated so we could get through life cause we need math for most of our life math is life every thing is made out of life the house we live in the food we eat the clothes we wear they had to be measured the length and width of our body are house needed to be measured too, to the size we want our food has to be weighted to the amount we want
- The purpose of education is that so when we get older we could get a job when we get older to pay for our education.
- The point of education is learning new things, and getting good at it. Will help you get a job when your older.
- Education is important so we can get a job to pay off our education when were older. Also, money is a good thing.
- The purpose of education is to help secure your future for jobs, such as construction and banking which involve skills such as mathematics and engineering.
- The Purpose of education is to Learn important things that will be very useful in life and to know such things u never knew before and to help improve yourself and move up in the world to do better then when you were not educated and to get the skills for when your older to get the job you want and have the skills to succeed in the job.
- The purpose of education is to learn things that will help you throughout your life. Education also helps to provide you with jobs, For example, passing Gr. 12 with high marks then going to college or university, would help you get into jobs like Lawyer, Doctor, etc. On the other hand without it you would be "lost" you wouldn't know how to do much of anything, and most likely have financial problems.

- The purpose of education is to make kids prepared for the world when they are on their own and to make life easier for them.
- The purpose of education is give knowledge to future generations so they can create new technology, and keep the economy going in the future. Education also helps future generations to find a job and start their future how ever they chose. Education also opens up the eyes of many to new things, and lets them look at the world in a different way. Education feeds the minds of the generations that will create floating cars, hover boards, and holograms. Knowledge is power.
- to teach you what you need to know for real life situations like cooking, how to learn how to get a job, programing, etc.
- The purpose of education is to prepare students for their future. To have a successful career and to open up your mind to new things they never thought were possible.
- The purpose of education is to teach the next generation what to do and to pass down knowledge.
- the purpose of education is that we have to get and education so we can get somewhere in life and have a good carrier.
- the purpose of education is to teach a person to think intensively and to think critically
- The purpose of education is to give knowledge to future generations so they can create new technoligy.
- The purpose of education is to teach kids important things. For example, I want to go into electrical engineering. That is an impossible job to do if you do not have the proper education. It also teaches kids responsibility.
- The purpose of education is to learn so you can a job in the future and don't end up on the streets living in a box.
- I think the purpose of education is grow children into productive citizens that use their knowledge, talents, and learned skills to sustain themselves.
- No idea I just abide by societys standards.
- The purpose of education is to teach people of any age what they need to know to strive in life and do more than just survive. Education is to give people the ability to think clearly and solve things or even do things simply as to avoid issues.

What does teaching look like to you?

- In my opinion teaching is when the teacher gives you a on something and then you have to do a assignment on it.
- in my opinion. In almost all of my classes teaching is just someone telling us what to do and for us to figure out the rest, there is barely any hands on teaching, which is the way I like to learn.
- Teaching to me can look like many different things. But the main thing is when teachers engage the students. If a student is actively listening and participating in a lesson, there is a much higher chance he will retain the information, instead of if the class was reading out of a book, where students tend to sidetrack themselves.
- Teaching is someone who helps students into being able to use what they know in actual situations that you will use this skill in.
- When a teacher brings many students in and tries to fill them in on as much information as they can in a specific time period.

- it looks like adults trying to help the future generation from stupidity JK kinda and to help out because teaching helps a lot we could probably not do it all by our self's so props! hahah (if you don't know what that means it mean thank you!!!)
- Teaching looks like a teacher in front of a bunch of student, actually connecting with them, not just teaching them.
- Teaching looks like trying to get people to try new subjects. Being patient with the student until they get it right. Trying new things until the student gets it right.
- Teaching can look like many things, such as a mother teaching her kid to behave, a school teacher teaching there students to do math, or a student teaching his/her teacher things about them everyday.
- In my opinion, teaching should look like a welcoming experience, with teachers giving students hands-on activities, student-teacher interaction, and an overall fun thing to do.
- Teaching looks like a teacher Showing and telling his/her class important stuff that will be useful in their lifetime.
- To me teaching looks like the teacher knows what it is doing and is confident with his or herself while teaching, He or she can easily get students focused and stay on task without a hassle. Also, getting engaged with the topic, and allowed for students willingly stay focused because of the interest they have grown for the topic.
- To me teaching looks like someone who actually cares for their students education and makes learning exciting.
- Teaching looks to me like students paying attention in class, and not falling asleep in class because what is being taught to them is so boring. Teaching looks to me like teachers actually caring how each student comprehends what their teaching. Teaching looks like the start of something new.
- Teaching looks like hands on things that will help you in life unlike how to find the angle of a triangle.
- To me, teaching looks like a teacher at the front of the class respectfully teaching his students. A teacher that can teach a lesson in a way students will want to pay attention and not wish they were somewhere else. It also looks like neither students or the teacher think they are more better than the other. They can have a respectful relationship with very little drama.
- To me teaching looks like a teacher standing in front of students and teaching them how to do things, by either telling them or showing them.
- teaching looks like a teacher teaching us things we need to know to get through our life.
- teaching looks incredibly boring. depending on what your teaching
- Teaching to me looks like a nice teaching who has fun and teaches people in the most fun way possible.
- Teaching to me looks like a teacher not just reading from the book, but actually understanding the information they are teaching. It is also the teacher helping the students understand as well.
- teaching looks like a teacher sitting in front of people talking about the meaning of life.
- Doing your job, helping kids learn and make a future
- Doing your job and doing it good. Getting students invloved, making sure noone falls behind.
- Teacher being the "top dog" speaking in front of a class full of kids.
- Teaching to me looks like not someone just showing you what to do but but showing you how to do it and making sure you know why you do that. Teaching isn't making sure that people have things memorized but making sure other people can think for themselves from then on.

What does learning look like to you?

- Learning in my opinion is when the students are listening and interacting with the teacher during the lesson.
- In my opinion. Learning is when I am hands on working a project of either something I want to figure out on my own, or something I am assigned. When I want to learn something the best way for me to do it is either read a manual or watch a step-by-step video. When I'm working on something that has been assigned to me by a teacher I would like for someone to give me a little bit of guidance.
- Learning to me looks like people are being actively involved in what they are being taught. People tend to listen better when they are part of what is going on. This is because as most young people, we tend to get off topic easily, especially with cell phones and the other gadgetry of today, where being actively involved in the lesson, keeps them on task, and depending on how they are involved, possibly helping them to enjoy learning.
- Learning is when a student is able to use the knowledge they were taught in actual situations.
- Learning is a student is intrigued in the lesson being taught with and the student understanding the lesson.
- Basically what I said on the first question, to actually remember that information and be smarter than before.
- learning looks like a hole bunch of nonscents but when u learn it you get so much of whats happing in the world
- Learning looks like doing projects that actually involve what the teacher taught.
- learning looks like choosing the harder and more difficult subject so that you can become good at it. Asking for help when you don't understand something.
- Learning to me looks like listening children sitting quietly, waiting to learn what they're teacher has to say to them
- Learning should be an environment that has students interested in what they are being taught, and learning things to apply to real world scenarios.
- Learning looks like learning important stuff you will use in later life.
- To me learning looks like students are focused, on task, and listening to the teachers requests. Again, the students are willing to learn for themselves due to the interesting the topic getting taught by the teacher. Students are quite and focused not talking to peers and getting of task with other things.
- To me learning looks like, when students are participating and wanting to learn and are actually caring about their education and getting involved.
- Learning looks to me like students are actually paying attention and focusing on their homework. Learning also looks like teachers focusing on what the students are doing and helping them if they don't understand. Learning is more then sitting at a desk reading from a textbook, learning is also from seeing, instead of reading about trees, we should see them, to really know what they are.
- How to take care of kids, how to afford a house, how to save up money, change a tire, learn basic first aid. that is what I want learning to be like in school
- To me, learning looks like students paying attention to the lesson being taught and it also looks like students participating in the lesson. Also students participating in any way they can. Whether it'd be answering/asking questions or copying notes down.
- Learning looks like people paying attention to the teacher.

- learning looks like us students getting taught something we need to know so we know what we are doing when we get older and we can get through life easier.
- I like learning new things that I'm interested in; if I HAVE to learn something then so be it.
- Learning to me looks like you are having fun working and doing work that is fun.
- Learning to me looks like asking questions, doing the work given to the best of my ability, and trying my best to understand the stuff taught to me.
- learning looks like learning how to not end up living on the streets in a box.
- paying attention, not slacking, doing work
- People paying attention getting involved not slacking.
- To me learning is focusing and effort. You should put the effort into learning it because that's the best way to learn. Learning is understanding why you need to learn something and putting forth the effort to learn it and being thankful that you are being taught.
